IaaS for SAP HANA: What is it?

IaaS for SAP HANA is a cloud infrastructure with **SAP-certified hardware** where you can develop ERP business process management solutions on a **BYOL** (Bring Your Own Licence) basis.

The service can be used either in **Appliance mode** or in **SAP TDI mode** (Tailored Data center Integration), thanks to the use of SAP-certified enterprise-level full flash Fibre Channel storage.

- **Appliance Mode -** High reliability of the solution with native HANA tools.

- **SAP TDI Mode -** Make the most of the highly reliable functions offered by the certified virtualizer (VMware), significantly reducing costs and complexity.

IaaS for SAP HANA: benefits

Speed

Using SAP HANA in the cloud means that it takes a matter of hours, rather than weeks or months, to activate a traditional infrastructure.

Scalability

Thanks to the dynamic nature of the cloud, memory and computing capacity can be scaled up or down depending on a company's business needs.

Savings

The pay-per-use solution means that you only pay for the resources you use and the BYOL model allows anyone with a SAP HANA license to enjoy the benefits without incurring additional costs.
Security

Multi-tenant environments are fully isolated, guaranteeing the client the highest levels of confidentiality when it comes to data protection.
